

HOW IS THE INTERNET UNSAFE?

INTERNET SAFETY

Your online actions can have real-world consequences!

Once something is online, it is there forever! You can not take it back. Always *THINK* before you post or send a message!

Impersonations and Fake Accounts

Some people may create fake accounts or impersonate someone to connect with and target certain groups such as children.

Sending and asking for sexually explicit photos and videos

It is common for people to ask for photos or videos of another's body, or to try to have a sexual conversation. This can be very risky! In some cases, these interactions can lead to the law being broken.

Attachments and links that are unsafe!

This can lead to a virus appearing on your device or allow the abuser to gain access to your information.

Cyberbullying

Cyberbullying is bullying that happens online. This can include harassment, posting photos/videos without consent, spreading rumors, and passing photos or videos around without consent.

Hacking

- Hacking is when someone obtains another's personal information and uses it to log in to their online accounts. Hackers may do this to steal money, find photos/videos, blackmail the victim, and more.
